Initial Mineral Resource Estimate (43-101 compliant) using 0.30 g/t AU cut-off

- Received November 20 2017
- Evaluated 400 meters of strike and 200 meters of depth only in estimate
- Gold grade is improving with depth
- QP Todd McCracken P.Geo(WSP Canada Inc.)

Go Forward Plans

- Drill up to 5,000 meters of diamond drill holes to
 - increase the evaluated strike length from the current 400 meters or ~20% of the Champion Bear identified strike length by infilling data gap areas on the main deposit
 - extend the strike length along trend east and west with targeted drill holes as deposit remains open along strike in both directions
 - drill more deep holes to increase the sample density and gold concentration at depth below the currently evaluated depth of 200 meters as Champion Bear has sampled gold at depths to 700 meters and deposit remains open at depth
- Split and sample all historical core containing the gold bearing quartz sericite schist
- Conduct an IP geophysical survey over the main deposit trend
- Update the Initial Mineral Resource Estimate following this work in 2018
